Quick Heal
Total Security *for Android*

Anti-Theft Security. Web Security. Backup. Real-Time Protection. Call & SMS Blocking.

Product Highlights

Complete protection for your Android device that simplifies security and significantly reduces the risk of data exposure.

- ▶ Recover your device in case of loss or theft.
- ▶ Block unwanted national and international numbers.
- ▶ Secure your precious data on cloud.
- ▶ Improve privacy and security level of your device.

Feature List

The best mobile security suite protects your mobile device using Anti-Theft feature and easy-to-use virus protection. This results in improved device performance, so you spend less on mobile maintenance.

SCAN DEVICE

This flexible feature offers the following functionalities:

- ▶ **Quick Scan** – This is an on-demand scan that starts scanning your mobile device at your request.
- ▶ **Custom Scan** – This gives you multiple scanning options such as:

    Full Scan – thoroughly scans your mobile device and its memory card.

    Scan All Apps – scans all the applications installed on your device.

    Scan Selected Apps - scans applications selected by you.

    Scan Memory Card – scans only the memory card.

    Scan Selected Folders – scans folders selected by you.

▶ **Schedule Scan**

This option allows you to schedule a virus scan at a time that is convenient for you. It offers:

◉ **Scan Types to Schedule -**

- Full Scan

- Scan All Apps

- Scan Selected Apps

- Scan Memory Card

- Scan Selected Folders

◉ **Scan Frequency** – You can choose from the following frequencies for this type of scan:

- **Scan while charging** - Scans your mobile device while it is being charged. For the scan to begin, your device battery must be 50% or more and the scan occurs once every 24 hours.

- **Once a day** – You can choose the time for the scan to begin.

- **Once a week** – You can choose the day and the time for the scan.

- **Once a month** – You can choose the date and the time for the scan.

▶ **Security Advisor**

The Security Advisor guides you about the settings that affect the overall security of your Smartphone and redirects you to the respective screen to change the settings.

Different Security Advisor settings are:

◉ Accounts and Sync

◉ Bluetooth

◉ Device Memory Encryption

◉ Hotspot and Tethering

◉ Quick Heal Anti-theft

◉ Quick Heal Background Scan

◉ Screen Lock

- ◉ Unknown App Sources
- ◉ USB Debugging
- ◉ Wi-Fi

▶ **Privacy Advisor**

Privacy Advisor notifies about the apps that could affect your privacy. It also helps you review the permissions used by these apps, and you can decide whether you want to keep the apps or not. The feature monitors apps with permissions such as:

- ◉ Access to Accounts
- ◉ Access to Contacts
- ◉ Read Identity Info
- ◉ Tracking Location
- ◉ Access to Messages
- ◉ Access to Network

OPTIMIZE DEVICE

This feature comprises the following functionalities that help increase your device performance:

▶ **Performance Monitor**

Allows you to check the functioning of your device, extend battery life, speed up device performance, and view performance reports.

- ◉ **Speed up Device -** the Speed Up Device feature stops running apps and kills idle apps on a regular basis.
- ◉ **Power Saving Mode -** helps increase your device's battery life by adjusting brightness, killing running applications, and disabling Wi-Fi, mobile networks, and Bluetooth.
- ◉ **Performance Summary** - gives you a detailed report on the CPU Usage, Battery Life, and Memory Usage of your device.
- ◉ **Kill Running Apps** - boosts device performance by killing running apps.
- ◉ **Apps Safe List** - you can prevent important apps from being killed by adding them to the Apps Safe List.

▶ **Network Monitor**

You can manage the networks that are in use on your device. You can check the current usage of all the networks and control the usage.

- ⊙ Network Usage Summary gives you a report of the data usage by various apps on your device. It also allows to set the data usage limit on Mobile Network and Wi-Fi Network.

- ⊙ Helps set data usage of mobile network and/or Wi-Fi networks in use. Allows setting maximum data usage limit within these networks.

- ⊙ Alerts the user if data usage reaches a specified limit.

- ⊙ Stops network once the data usage reaches the maximum limit.

SECURE DATA

This feature consists of the following functionalities that help keep the data on your device safe:

▶ **Backup Data to Cloud**

Lets you save your important data on cloud.

▶ **Restore Backup from Cloud**

Lets you download the data backup you have on cloud.

▶ **Delete Backup from Cloud**

With this feature, you can remove any data saved on cloud.

▶ **Delete Personal Data**

This is a secure deletion method where data is removed permanently. It allows you to wipe out contacts, SMSs, SIM card data, calendar events, and SD card data.

SET PRIVACY

The Set Privacy feature allows you to protect your privacy with the following functionalities:

▶ **Call and Message Filter**

With this feature you can easily block incoming calls and SMSs from unknown or unwanted numbers. And now, you can also use this feature to block all numbers belonging to a particular series. For instance, if you block the series "8007", all phone numbers beginning with this series will be barred from reaching you.

▶ **International Call Block**

With Quick Heal Total Security, you can now also block unknown International calls.

▶ **Message Exception List**

This list displays non-numeric senders that are excluded from SMS blocking.

▶ **Privacy Protection**

With Privacy Protection you can maintain private contacts and secure important call logs and messages from or to those contacts.

- As per your requirement, you can customize contacts, their call logs and SMS details to be private or private-cum-public.
- You can secure important call logs of private contacts.
- You can secure important messages received from or sent to private contacts.

▶ **Parental Control**

The Parental Control feature helps you block malicious and potentially dangerous websites. The feature allows you to:

- Block websites based on their categories such as adult, crime & violence, gambling, social networks, illegal software, etc.
- Block URLs of specific websites.

You can also exclude certain websites from getting blocked even if their category is in the blocked list.

▶ **Register With TRAI**

This feature offers the following benefits:

- ⊙ **Fully Block** – Blocks all telemarketing calls and SMSs.
- ⊙ **Partially Block** – Blocks all telemarketing calls, and category-based SMSs.
- ⊙ **Report a Number** - Allows you to raise a complaint with TRAI against unwanted telemarketing calls and SMSs.

MESSAGE CENTER

Displays important notifications which require your attention. The Message Center also displays the latest news, updates, and important alerts from Quick Heal lab.

CALL FORWARDING

Helps you set a number to which all your incoming calls will get forwarded. You can also set this number by sending an SMS or via your RDM (Remote Device Management) account.

Note: This feature may not work on SIM cards in secondary SIM slots.

PERSONAL SECURITY

This feature can help you in times of emergency. If you press the power button of your phone 3-5 times, this feature activates the emergency mode. In this mode, an SOS message with your current location will be sent to the alternate contact numbers set during the time of registration. Your Facebook and Twitter status will also get updated with an SOS message.

Before the emergency mode gets activated, you will be given a time frame of 10 seconds. Within this time period, you can choose to cancel or continue with the emergency mode.

BACKGROUND SCAN

Provides automatic real-time virus and spyware scans with optional manual scan.

- Ensures automatic protection from all kinds of malware threats.
- Scans applications when they get installed on the mobile device. (Applicable for Android only)
- If you have to use another memory card, the anti-virus engine scans the memory card before transferring any data.
- Allows you to use your mobile device while the scan runs in the background.
- Can be configured to exclude applications from scanning. (Applicable for Android only)
- Can be configured to exclude folders from scanning. (Applicable for Android only)

ACTIVITY

Get in-depth reports on all the activities carried out by Quick Heal Total Security on your Android device. These include reports on:

- Virus detections
- Blocked SMSs
- Blocked calls
- Activities related to anti-theft
- Any sites that were blocked
- Backup
- Updates taken for virus definitions, etc.

ANTI-THEFT

Quick Heal's anti-theft technology prevents your device from being misused. It allows you to lock your device or erase its entire data remotely, if it gets lost or stolen. The technology offers the following layers of advanced protection to your Android:

▶ **Remote Locking**

Blocks usage of your phone if it is lost or stolen.

▶ **Mobile Tracking**

Helps in locating your lost or stolen device.

▶ **SIM Change Notification**

If the SIM is changed, the new number will send an SMS to the owner's alternate mobile number informing about the SIM change.

▶ **Block phone on SIM card change**

If the SIM card of your Smartphone is changed after it is stolen, the security suite blocks usage of the mobile phone.

▶ **Remote Data Wipe**

Helps you delete the data on your phone remotely.

▶ **Auto Dial**

Allows you to discreetly receive a call from your device and hear surrounding sound in case of loss or theft.

▶ **Auto Receive Call**

Allows you to discreetly make a call to your device and hear surrounding sound in case of loss or theft.

▶ **Image Capture**

Allows you to take an image from the front and rear camera of your device.

▶ **Audio Recording**

Allows you to record the surrounding sound around your device.

▶ **Video Recording**

Allows you to record the surrounding video around your device.

SECURITY SHIELD

The Security Shield displays the security level of your device and data through a graphical representation. By tapping this shield, you can configure the security settings of your device.

- ⊙ The orange circle indicates the current level of security on your device.
- ⊙ The check mark inside indicates that your device is in a completely secured state. An exclamation mark would indicate that your device is unsecured.

REGULAR AUTOMATED VIRUS UPDATES

Quick Heal Total Security for Android receives regular automated security updates. This helps protect your device and data from new and emerging threats.

TRUSTED SIMS LIST

Quick Heal's anti-theft feature blocks your device if an unknown SIM card is used in it. The Trusted SIMSs List feature allows you to make a list of SIM cards that you trust and are aware of. Using any of the SIMs mentioned in this list will prevent your device from getting blocked. Fifty (50) SIM numbers can be added to the Trusted SIMs List.

REMOTE DEVICE MANAGEMENT

This feature helps you manage your lost or stolen device via Quick Heal's Remote Device Management Portal. From this portal, you can perform the following actions:

- Remotely lock, unlock, and erase data from your phone.
- Track your phone's location.
- Take backup of personal data such as contacts, calendar events, and SMS on Quick Heal cloud.
- Configure Parental Control.

INTRUDER DETECTION

If someone enters a wrong password 2 times consecutively (for the device's lock screen or Quick Heal anti-theft block screen), this feature will take snapshots using the front and rear camera.

QUICK SETTINGS NOTIFICATION

Make use of an easy shortcut to change the following settings on your device:

- Wi-Fi
- Bluetooth
- Mobile Data
- Brightness
- Torch

NEWS

The News feature provides you with the latest news and alerts from Quick Heal labs. News about computer and mobile protection, and other noteworthy events are displayed here.
