UTM Solutions for SOHOs and SMBs

With adoption of sophisticated and complex technology at workplace, SOHOs and SMBs (small and medium businesses) are becoming increasingly vulnerable to cyber threats. It is extremely challenging for network administrators to monitor and control security threats. They continue to depend on multiple security solutions such as firewall, intrusion prevention systems, anti-virus and more, to protect their network security.

In a sophisticated and complicated technology world, business enterprises have to stay connected anytime and anywhere. **A United Threat Management (UTM) reduces security complexities by integrating key IT security features in one integrated network security product**.

Seqrite TERMINATOR is a high-performance, easy-to-use Unified Threat Management (UTM) solution for small and mid-size enterprises. The new collaborative platform architecture brings network security, management, backup and recovery of UTM data, and many other critical network services together under a single unified umbrella. TERMINATOR is tailored to suit the complexity of emerging threat scenarios. This fully integrated product is a simple and smart way of replacing multiple security programs with one solution.
