EPS 7.x to 8.3 Offline Migration

Seqrite recommends customers of Seqrite Endpoint Security 7. x should migrate to Seqrite Endpoint Protection 8.3.

Type: External

Objective: This guide outlines the step-by-step process to migrate your Seqrite Endpoint Security user data to Seqrite Endpoint Protection 8.3 in an offline (air-gapped) network environment.

Description: For the current Seqrite Endpoint Security 7. x customers, Seqrite is providing a tool to migrate data of clients, groups, and policies from Seqrite Endpoint Security 7.x to Seqrite Endpoint Protection 8.3.
This page is active for only 60 days from the activation date of the Migration feature.

Steps for Offline Migration

Follow the below mentioned steps to perform migration from the 7. x version to EPP 8.3.

1. To Activate the Migration feature to enable data migration from Seqrite Endpoint Security 7.x to 8.3. Contact Seqrite Support for assistance.

2. Support team provides respective Export tools (7.2, 7.4, 7.6) required for specific 7.x servers.

3. Run the Export Tool on the 7.x Servers that is ready for migration.

4. Now locate the Export tool, find the Export.zip file generated in the default location: C:\Program Files (x86)\Seqrite\Endpoint Security 7.60\Admin\Export or at the user defined custom location.

5. To Import the data to the EPP 8.3 Server
   a) Import the Export.zip file to the 8.3 server:
   b) Navigate to Deployment > EPP 7.x Migration tab > Import data.
   c) Follow the prompts displayed to proceed for a successful import.

6. Go to Deployment > EPP 7.x Migration tab.> download Migration Tool from 8.3 Server

7. Execute the Migration tool downloaded from the 8.3 server on 7. x server.

8. Select group wise or migrate All Clients.

9. If group wise Migration is selected.

   a. Navigate to Migration to 8.x from the 7.x server.

   b. Select Clients > Manage groups > select the respective group for Client Migration.

10. Post Migration upon system reboot verify the following.

   a. After reboot, all Clients are migrated from the specified groups to the Seqrite Endpoint Protection 8.3 server is complete.

b. Navigate to the Seqrite Endpoint Protection 8.3 server. Ensure all clients are correctly grouped with applied configurations in Seqrite Endpoint Security 7.6.

c. Ensure all policies imported with each group are successfully and applied to the migrated clients on the 8.3 server.
